IDENTITY

Company sign-in & SCIM

Your staff sign in to Awacino with the identity provider you already run, and users and roles follow your directory.

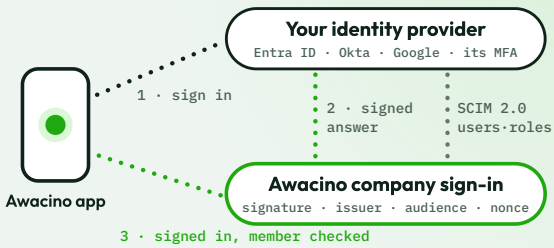

What it is

Company sign-in connects Awacino to your identity provider (IdP) with **OpenID Connect** or **SAML 2.0**. Users choose "Sign in with company account", sign in at your IdP with its own MFA, and return to the app signed in. **SCIM 2.0** keeps the user list in step with your directory: new staff appear, leavers are deactivated within minutes.

Key capabilities

- **OIDC and SAML 2.0 through Awacino's own sign-in broker.** Setup steps for Microsoft Entra ID, Okta and Google Workspace; other OIDC providers (Keycloak, Auth0, Ping, JumpCloud, OneLogin, ADFS 2016+, Authentik) through their discovery document.
- **Strict checks.** Signature, issuer, audience, nonce, expiry; Entra ID locked to your tenant, Google Workspace to your domain. SAML: signed assertions, two certificates for rollover, metadata refreshed daily.
- **SCIM 2.0 provisioning** of users and groups. Groups map to roles (e.g. `awacino-admins` → ADMIN); new users start as READ without devices. Deactivation in the IdP ends the user's sessions at once.
- **Test, then enforce.** A test sign-in must pass first. Once enforced, addresses on your domains can only use your IdP; other sign-ins are refused on the server.
- **Break-glass account.** One account with password and second factor may sign in past enforcement, so an IdP outage does not lock you out. Every use alerts all admins.
- **Verified domains.** Proven by a DNS TXT record, checked daily; public mail domains can never be claimed.

HOW IT WORKS

The IdP only talks to the browser. Awacino checks the answer, the domain and that the user is an active member, then signs the app in.

Plan availability

PLAN	INCLUDED
Basic	Verified domains, break-glass account; staff use Awacino's own sign-in
Standard	As Basic
Premium	Company sign-in (OIDC, SAML), enforcement, SCIM provisioning

Every plan limit is checked on the server. A downgrade stops enforcement and SCIM; nothing is deleted. The company version is rolled out in stages: ask us what is live for your plan.

Requirements

- Commercial Premium plan and at least one verified domain
- Admin access to your IdP to register an OIDC web app or a SAML app; for SCIM, an IdP with a SCIM 2.0 client (e.g. Entra ID, Okta)
- Not in this release: encrypted SAML assertions, Google Workspace directory sync
