DEPLOYMENT

Managed deployment (MDM)

Roll Awacino out with the tools you already use: your MDM for staff devices, the device installer or Docker for servers.

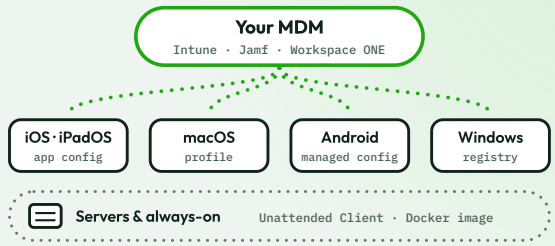

What it is

Awacino installs silently through the usual store and MDM channels and reads two optional app configuration keys, so a managed device opens straight on your company sign-in. Servers and always-on machines run the Awacino Unattended Client or its Docker image; they dial out and open no inbound port.

Key capabilities

- **Two app configuration keys.** `CompanyDomain` (e.g. `example.com`) opens "Sign in with company account" with the domain filled in; `HidePersonalSignIn` shows only the company sign-in and "This device is set up by your company." Hiding is cosmetic; the rule itself is company sign-in enforcement on the server.
- **Microsoft Intune, Jamf, Workspace ONE.** iOS and iPadOS: Managed App Configuration. macOS: a configuration profile for the app. Android: managed configurations. Windows: registry policy `HKLM\SOFTWARE\Policies\Awacino` (Intune settings catalog, OMA-URI or GPO).
- **Silent installation.** Apple Business Manager (Apps and Books) with your MDM; Windows through Intune "Microsoft Store app (new)" or `winget`; managed Google Play; Linux `snap install awacino`.
- **Servers and always-on devices.** The Unattended Client runs headless on Linux servers (x86 and ARM), NAS, Mac and Windows, without admin rights, and reaches the network it sits in.
- **Docker.** Image `docker.awacino.net/awacino/unattended` for linux/amd64 and linux/arm64, one compose file, starts on boot, one setup code per device. Kubernetes deployment (DaemonSet, Helm) is planned.

HOW IT WORKS

Staff devices get the app and its keys from your MDM; servers use the device installer or the container image.

Plan availability

PLAN	INCLUDED
Basic	● Silent installation, Unattended Client, Docker image
Standard	● As Basic
Premium	● + the app configuration keys take effect with company sign-in (SSO)

Every device and every app installation counts as a slot; browsers are never counted. The company version is rolled out in stages: ask us what is live for your plan.

Requirements

- An MDM that pushes managed app configuration (Intune, Jamf, Workspace ONE or similar); for the keys, company sign-in on Premium
- Windows: Microsoft Store access or `winget`; Apple: Apple Business Manager
- Servers: Linux, Mac or Windows, or Docker with Compose; outbound internet access, no inbound port
- Not available: managed configuration on Linux and in the web app
